Lock Option Kit: OPT-LOK includes what you see here:

Keeper
and 2 Euro Screws
5mm x12mm M4 thread

2 Self-tapping
metal screws
#10-32 3/8 PH, PR,
Trilobe

4 One-way
tamper proof security screws

Lock Assembly with
2 keys

7 Pan Head Phillips #2
#8 5/8 #10 thread
wood screws

1. Install the keeper bracket

Install the Keeper Bracket with 2 Euro screws with #2 Phillips drive and screw gun.

Before installing the screws, break the membrane with a screwdriver for an easier installation.

2. Tap the screw locations

Use a #2 Phillips screwdriver to tap the threads for installation of the lock assembly to the frame on user side.

Start both screws, then remove one. Leave one installed part way.

3. Attach lock assembly

Capture the metal screw with the lock assembly with one of the oblong slots.

Move the assembly into position, then install the second metal screw, then tighten both down.

4. Tighten Lock Assembly

Use a 3/8" open end wrench and slot blade screwdriver to tighten the one-way tamper proof bolts into the nylon backed locking nuts. This can only be done once.

5. Fasten lock assembly to underside of table top

Install 6 Pan Head Phillips #2 wood screws: #8 5/8 #10 thread

6. Test lock operation

The plunge lock is designed to be captured by the keeper when pushed into the locked position.

It should clear the keeper when in the unlocked position.

If this is not the case...

Loosen the keeper Euro screws and slide it so that it clears the the plunge lock bar in the unlocked position.

Tighten the keeper Euro screws.

7. OPTIONAL

For added security, ONE-WAY tamper proof screws are provided. If this added measure of security is desired, remove 4 of the black wood screws and replace with tamper proof screws.

YOU CAN ONLY DO THIS ONCE.

Finished installation flipIT® FIK-19-L
